A probable missile impact area with a CEP of about 500 feet has been identified on the Kapustin Yar Missile Test Range. It is located at 48°54'N/ 48°11'E, approximately 75 nm east of the rangehead.

The area is characterized by two probable instrumentation sites connected by extensive vehicle tracks and/or cable scars, with the impact area located at a point approximately halfway between these sites. This area is probably the impact point for a 75 nm guided missile.
